

# Counterexample Visualizer Tool Feedback

---

## Demographics

---

1. What is your role? (Students, Teachers, Developer, Tester, DevOps, etc.)
2. How many years of experience do you have in software development?

## Programming Languages

1. what programming language do you most commonly write in ?

## Experience with debuggers

---

1. Have you used debuggers like gdb and lldb
2. How often do you use these tools? (daily, weekly, monthly, rarely)
3. What are the biggest challenges you face when using these tools?

## Potential Features for implementation

---

1. Would you find a tool that visualizes counterexamples useful?
2. Which of the following features would you find most useful in such a tool?
  - Interactive timeline of variable states
  - Search function to quickly find a specific variable or state
  - Integration with your preferred development environment (VSCode, etc.)
  - Detailed view of variable states
  - Ability to annotate or add comments to certain states
  - Comparison view to compare variable states across different steps
  - Breakpoints: The ability to set breakpoints at specific states or variable assignments
  - Highlighting assertion violations
  - Tutorial or guidance: A built-in guide or tutorial that explains how to use the tool and interpret the visualized counterexamples could be beneficial, especially for new users.

3. Are there any other features you would like to see in such a tool?

## Integration

---

1. Would you prefer a standalone tool, or a tool that integrates with your current development environment?
2. If an integrated tool, which development environment do you use? (VSCode, IntelliJ, Eclipse, etc.)

## Platform

---

1. Which operating system do you typically use for development? (Windows, Linux, macOS, etc.)

## Testing

---

1. Would you be willing to participate in future user testing or provide feedback on the tool once it's developed?
